

Archives — Subscribe Flow Spec

AFF-844 · PostHog Project 93650 · Generated 2026-04-30

Legend: Normal = tracked & in codebase **Red** = not in codebase, needs implementation **Grey** = in codebase but not wired
Blue = checkpoint **Dark Grey** = alternate entry path

User Journey

Events

#	Node	PostHog Events	QA
1	Subscribe Tab	subscribe_tab_viewed paywall_type: embedded \$pageview page: subscription, url: /subscribe	Blank screen; spinner stuck; offerings not loaded
2	Onboarding Paywall	onboarding_paywall_viewed paywall_type: custom onboarding_paywall_cta_tapped SEE MY FREE OFFER button — currently routes to /(tabs)/today with no event	Screen renders but CTA unresponsive; no analytics on mount or CTA tap
3	Daily Story Rewind	daily_story_rewind_tapped story_date, is_subscribed, days_ago daily_story_rewind_blocked story_date, days_ago rewind_paywall_viewed paywall_type: revenuecat_modal, story_date, days_ago	Calendar tap shows no paywall; modal doesn't present
4	Locked Era	era_selected era_id, era_name, context: era_switch era_paywall_viewed paywall_type: revenuecat_modal, era_id, era_name	Locked era does not open paywall; era card tap unresponsive
5	AI Quiz Explanation	ai_quiz_explanation_requested adventure_id, module_id quiz_explanation_paywall_viewed paywall_type: inline_card, adventure_id, module_id	UPGRADE button unresponsive; explanation loads but paywall card doesn't render

6	Chat to Learn	quiz_results_chat_to_learn_tapped adventure_id, module_id, era_id chat_to_learn_paywall_viewed paywall_type: revenuecat_modal, adventure_id, module_id	Chat opens without subscription check; paywall not shown for free users
7	Paywall Presented	subscribe_screen_viewed trigger, paywall_type (embedded custom revenuecat_modal inline_card) paywall_plan_viewed plans shown to user — not tracked, RevenueCat UI handles internally	Paywall blank; offerings not loaded
8	Plan Selected	paywall_plan_selected RevenueCat UI handles plan selection internally — no PostHog event fires when user taps a plan	Plan tap does not start purchase
9	Purchase Completed	subscribe_purchase_completed (trigger, plan, era_id?, era_name?) subscription_purchased (product_id, plan_type, price_usd, currency, offering_id, is_trial) Fires from useRevenueCat.purchase() only — NOT from RevenueCat Paywall UI callbacks \$set (rc_subscription_status: active, subscription_product_id, subscription_billing_cycle)	Purchase succeeds but UI stays on paywall
10	Purchase Cancelled	subscribe_purchase_cancelled (trigger, era_id?, era_name?)	Cancel dismisses sheet but fires no event
11	Purchase Failed	subscribe_purchase_failed (trigger, error_code?, era_id?, era_name?)	Error toast not shown, user stuck

12	Restore Tapped	subscribe_restore_tapped (trigger: subscribe_tab) Only wired in Subscribe Tab — imperative paywall (modal) entry points do not fire restore_tapped	Restore button unresponsive
13	Restore Success	subscribe_restore_success (trigger, era_id?, era_name?) \$set (rc_subscription_status: active, subscription_product_id, subscription_billing_cycle)	Restore reports success but entitlement not active
14	Restore Failed	subscribe_restore_failed (trigger: subscribe_tab) Only wired in Subscribe Tab	Silent failure, no error message
15	Subscriber Active	\$set (rc_subscription_status: active, subscription_product_id, subscription_billing_cycle) subscription_activated No single event marks the moment a user becomes an active subscriber (status change from inactive to active)	Subscribe tab still shows paywall after purchase

Questions This Flow Answers

Strategic Questions

1. How many users see the subscribe paywall each day?

2. How many users complete a purchase after seeing the paywall?
3. How many users cancel the purchase flow after starting it?
4. How many users use the restore purchases feature?
5. How many users encounter a purchase error?

Behavioral Insights

6. How many users reach the paywall from the Subscribe tab?
7. How many users reach the paywall from a locked era?
8. How many users reach the paywall from the daily story rewind?
9. How many users reach the paywall from the AI quiz explanation?
10. How many users reach the paywall from Chat to Learn on quiz results?
11. How many non-subscribers are blocked from accessing past daily stories?
12. How many users who are blocked from daily story rewind go on to purchase?
13. How many users restore purchases successfully?
14. How many users attempt restore but fail?
15. How many users purchase a monthly plan?
16. How many users purchase a yearly plan?
17. How many users start a free trial?

Checkpoint Validation

18. **Subscribe Tab:** Do users who open the subscribe tab actually see the paywall?

19. **Paywall Presented:** Does the paywall load successfully for every entry point?
20. **Purchase Completed:** Does every successful purchase result in an active subscription?
21. **Subscriber Active:** Are person properties updated correctly after purchase or restore?

Analysis Notes

Dual purchase event system: `subscribe_purchase_completed` fires from the RevenueCat Paywall UI callbacks (all entry points), while `subscription_purchased` fires from `useRevenueCat.purchase()` only when the hook's `purchase()` function is called directly. The imperative paywall (modal) entry points (daily story rewind, locked era, AI quiz, chat to learn) only fire `subscribe_purchase_completed`, not `subscription_purchased`. The Subscribe Tab fires both because it uses the embedded `RevenueCatUI.Paywall` component AND the `useRevenueCat` hook's listener updates `syncSubscriptionToPostHog`.

Onboarding paywall gap: The onboarding paywall screen (`onboarding-step-13.tsx`) currently has zero analytics events. It marks the paywall as "seen" in `AsyncStorage` via `PaywallGateService` but does not track screen views or CTA taps. The "SEE MY FREE OFFER" button routes directly to `/(tabs)/today` without presenting the RevenueCat paywall, suggesting this screen is a soft-sell placeholder, not a live purchase flow.

Plan selection blindspot: The RevenueCat Paywall UI handles plan rendering and selection internally. There is no PostHog event when a user views available plans or selects one. We only learn which plan was purchased after the fact from `subscribe_purchase_completed`. Users who browse plans but do not tap "Subscribe" are invisible.

Missing subscription_activated event: No single event fires at the moment a user transitions from non-subscriber to subscriber. Person properties are updated via `$set`, but there is no dedicated event for funnel analysis of the activation moment. `subscribe_purchase_completed` and `subscribe_restore_success` serve as proxies but do not capture upgrades from external sources (promo codes, web billing, family sharing).

Founding Member detection: The app detects founding members by checking for the `Archives_Lifetime_Offer` product identifier on the `Access of All Eras - Yearly` entitlement. These users see a special thank-you screen instead of the paywall. There is no
